

Moving Around the Virtual “Town Square” (*Cheeks Family Website*)

“Pinch-to-Zoom”

Expanding and shrinking items on a touchscreen, including mobile phone screens, is done using a multi-touch gesture called “**pinch-to-zoom**”.

The new website engine has implemented this functionality for mobile phones, tablets, laptops and desktops that support touchscreen.

- **How to Expand (Zoom-In)**

- Place two fingers (usually your thumb and index finger) close together on the screen.
- Move your fingers **away from each other** while maintaining contact with the screen.
- Lift your fingers when the content expanded to the desired size.

- **How to Shrink (Zoom-Out)**

- Place two fingers apart on the screen over the item, photo, etc.
- Move your fingers **toward each other** (*pinching them together*).
- Lift your fingers once the view is reduced to the desired size.
